The **winning** team for
quartz agglomerate

Great teamwork is essential to reach the highest levels of homogeneity and polishing gloss. The Vincent / ADI LunaAbrasivi / NoCoat team has created the ideal sequence for squaring, calibrating, grinding, polishing and surface care to achieve slab perfection with every single finishing.

With **Innovation Quartz** technologies it is possible to attain the best gloss levels and finishings free of surface defects such as smears and shadows.

In addition, the latest generation **B-Clean** surface treatment renders the surface water resistant and tolerant of difficult stains such as coffee, tea, oil, wine and fingerprints.

The synergies created by the union of the individual companies place the Surfaces Group at the technological forefront of the quartz agglomerate industry.

Pre- and After-Sales Technical Support

Surfaces Group offers the **complete solution**, for all phases, from squaring to polishing up to the final treatment, offering customers the opportunity to refer to one single contact person for each phase of the production process.

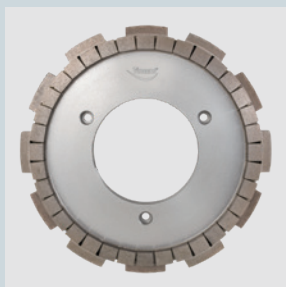

Flexibility

Surfaces Group's wide range of tools allows exactly the right tool for each stage of the production process to be provided. Surfaces Group can customize products that are aimed at obtaining excellent levels of quality with unique performance on the market.

Sustainability

Sustainability is the hallmark of Surfaces Group's industrial policy, targeted to provide metal and resin tools free of harmful substances such as nickel and cobalt.

step **1** Squaring

step **2** Calibrating

- . high cutting power
- . long life
- . excellent surface finishing
- . variety of bonds and geometries available
- . very high feed rates

Calibrating tools available in all sizes and fittings to be installed on every machine on the market.

step 3 Grinding

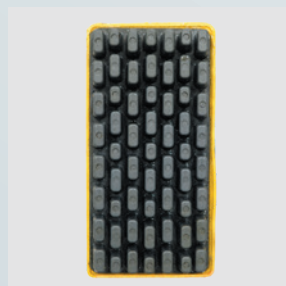

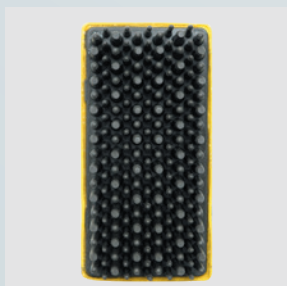

- . high cutting capacity
- . long life
- . optimized geometries for defect-free surfaces

step 4 Polishing

Special treatments

- . no shadows or burns
- . excellent gloss levels
- . extreme depth of slab color
- . wide range of bonds and types available for each individual grain

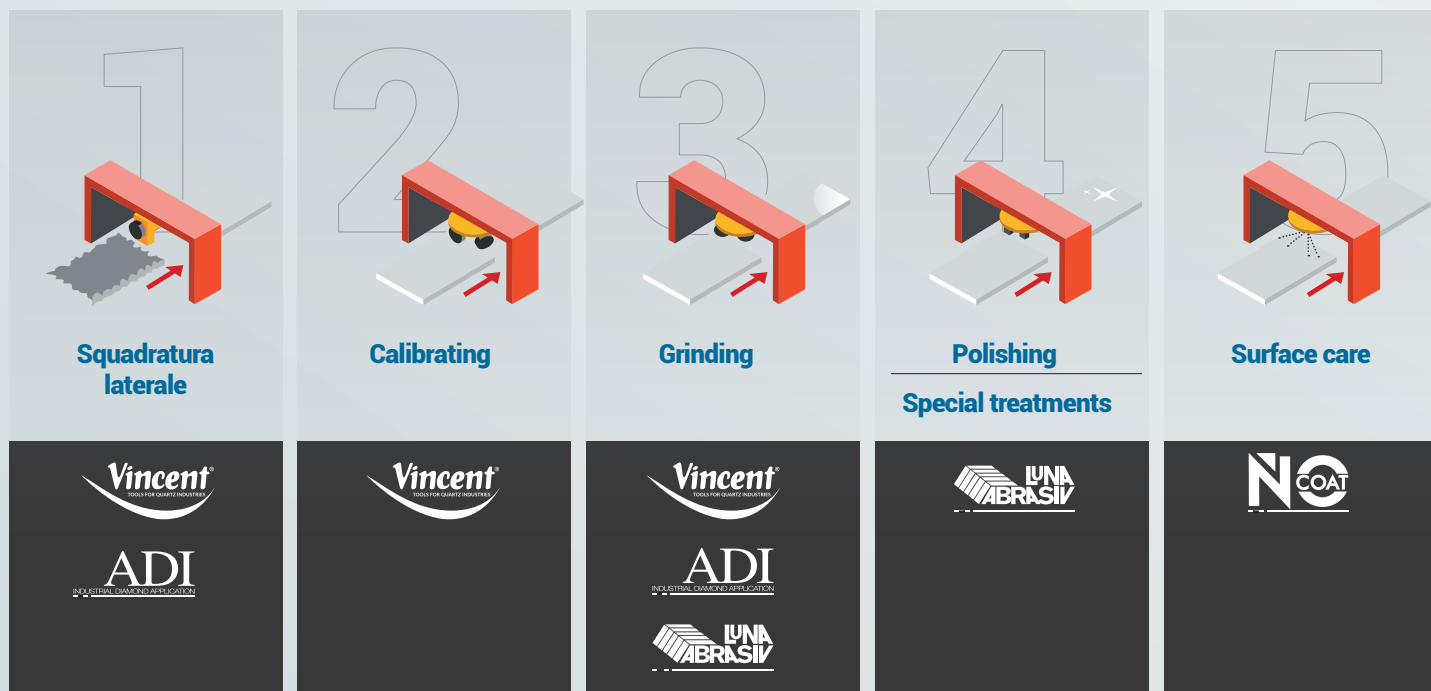

step 5 Surface care

- . water resistant
- . resistant to stains such as coffee, tea, oil and wine
- . fingerprint resistant
- . antibacterial solutions available
